

Mycorrhizae Ultrafine Endo-Ecto

GUARANTEED ANALYSIS

4 species Endomycorrhizae 130,000 Endomycorrhizal Propagules per lb.
7 species Ectomycorrhizae 110 million Ectomycorrhizal Propagules per lb

Mycorrhizae Ultrafine Endo-Ecto is a granular mycorrhizal inoculum consisting of 4 species of endomycorrhizal fungi and 7 species of ectomycorrhizal fungi. About 95% of the world's plant species form symbiotic relationships with at least one of these types of symbiotic soil fungus. These beneficial fungi greatly increase the effective rooting area of plants, thereby enhancing plant growth, vigor, and tolerance of environmental extremes.

Mycorrhizae Ultrafine Endo-Ecto is a granular material containing mycorrhizal propagules, which colonize roots and extend into the surrounding soil forming an essential link between plants and soil resources. Increasing the rooting area allows improved access to water and nutrients, promoting plant quality and crop performance.

General Application

Mycorrhizae Ultrafine Endo-Ecto is a granular mycorrhizal inoculant that can be banded under seed, worked into seedbeds, placed under cuttings, blended into potting media, or sprinkled on roots at time of transplant. Use higher rates for propagation or high-stress circumstances. The goal is to create physical contact between the inoculant and the growing roots.

Plantings:

- Apply in furrow at a rate of 0.17 oz/ft (15.8 g/m) of row. Apply to cuttings at a rate of 0.085 oz (2.4 g) under each cutting.
- Apply to potted plants/transplants at a rate of 0.5 to 1 oz/gal (3.74 - 7.49 g/L) size pot.
- Apply to Balled and Burlapped trees and shrubs at a rate of 0.5 to 1.5 oz/in (5.58 to 16.74 g/cm) of stem caliper.
